

DESIGN TIPS USING SPOT COLOURS

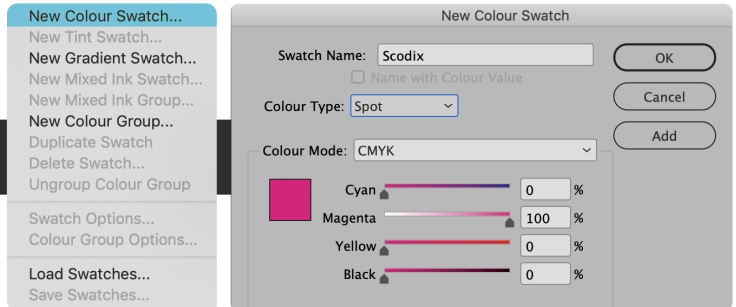

CREATING AN ENHANCEMENT FILE FOR SCODIX

Let customers feel your creativity - literally.

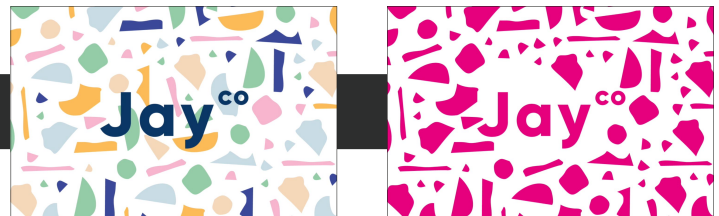

Scodix will help your print outshine the competition and deliver truly memorable results. Making even the most imaginative ideas a reality, with dazzling effects that aren't just the stuff of dreams.

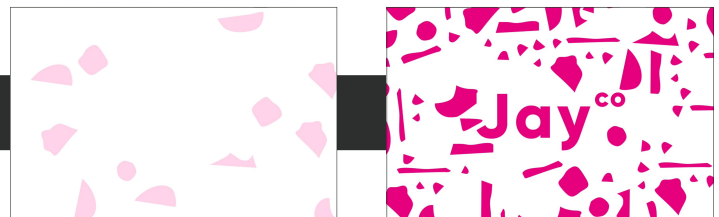

Create a new colour swatch. Change the colour type to **Spot** and label the swatch name **Scodix**. Choose a colour that enables you to easily identify Scodix elements within your document, such as **100% Magenta**.

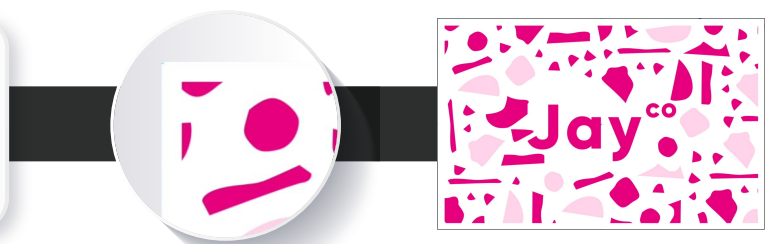

Duplicate the pages you would like to add Scodix to, select elements you want to enhance and colour them with the Scodix swatch.

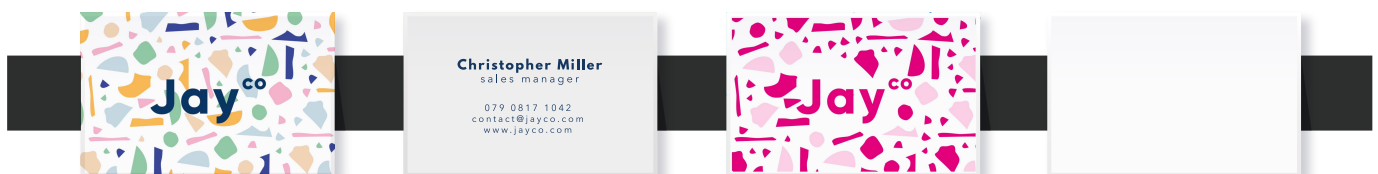

You can vary the build height of individual elements by adjusting the opacity. For the best result, we recommend **20% for low build** areas and **100% for high build**.

Be sure to leave a **2mm clear area** around the edge of the design and fold areas. This is required to avoid cracking when cut by the guillotine.

Supplied PDF must contain both print, Scodix elements and blank page as a single file (shown below). See our scodix file preparation guide for more information.
