

# T-Shirt - Back Print

Portrait / 280x400mm

## How to set and supply your artwork correctly

1. Select: *Layers Tool*:  (F7) > Select: *Artwork (place here)* layer.  
Create/Add your design to the *Artwork* layer.
2. Once your design is complete, please remove the *Guide* layer.  
**Failure to remove will result in the guide layer printing over your artwork design.**
3. Export to: *Adobe PDF (Print)* (PC: ctrl+ E / Mac: cmd+E).  
**Please ensure when exporting to a PDF file you select 'pages':**

**For more detailed information:** Please download our Product Guide from our product page.

- **Accepted format:** Adobe PDF (Print). Ideally: PDF/X-4a: 2001 (one file)
- **Colour:** CMYK (RGB and Pantones will be converted)
- **Fonts:** Embedded or converted to outlines
- **Image Resolution:** 300dpi to 450dpi

**Finished Size** - This is the size of your printed area.

**Safe Area** - We recommend keeping text and important content out of the grey area.

**Bleed** - Please extend your artwork into this section. This is to avoid white or unprinted edges when trimmed to finished size.

**Please note:** Any areas set to 'White' will print. If you require transparent areas (e.g. so that the t-shirt material shows through) please ensure these are set to 'no fill'.

If you are supplying a front and a back design, please ensure your front design is page 1 and your back design is page 2 of your PDF.

We position the print area approximately 50mm from the neck line. Please use the 'Tshirt positioning guide' layer to place your design within the print area.
