

# NCR ARTWORK PREPARATION

## CORRECTLY PREPARING ARTWORK FOR PRINT

### Setting up artwork

Please ensure artwork for NCR content is set up correctly by using only PANTONE colours. Pantone colours are standardised colours that are able to be referenced and replicated exactly. Any artwork supplied in RGB or CMYK colour format will be rejected by our automated workflow. We support printing of 1 or 2 spot colours within your designs.

If you require black ink on your NCR pad, please ensure the colour is 100% black and not a black composed up of 4 colours (CMYK). Shown in the image to the right. Artwork supplied this way will be rejected by our workflow.

### Numbering & perforation

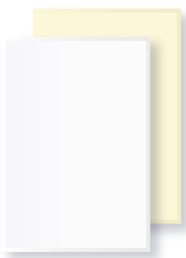

If you order perforation or numbering please indicate the position of these by adding a second page to your pdf. On the edge you would like perforated please indicate with a dotted line leaving a 20mm safe area from the page edge. Please indicate where you would like numbering to be placed along with what number you would like to start from.

### Colour variations

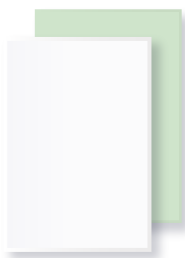

Available in collated two and three-part colour sets shown below:

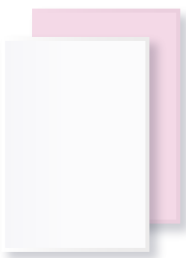

White/White

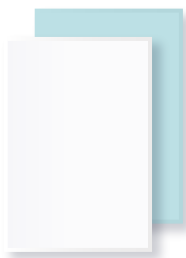

White/Yellow

White/Green

White/Pink

White/Blue

White/Blue/Yellow

White/Yellow/White

White/Yellow/Blue

White/Pink/Yellow
